

ABSTRACT

A method for inhibiting neoplastic cells and related conditions by exposing them to substituted indole derivatives.

1. The present invention relates to a method for inhibiting neoplastic cells and related conditions by exposing them to substituted indole derivatives. The method is particularly useful for the treatment of cancer and related conditions. The substituted indole derivatives are used in the form of a composition, which may be in the form of a solution, a suspension, or a solid form. The composition is applied to the cells or conditions to be treated. The method is particularly useful for the treatment of cancer and related conditions. The substituted indole derivatives are used in the form of a composition, which may be in the form of a solution, a suspension, or a solid form. The composition is applied to the cells or conditions to be treated.
